

Employee Portal Project

Overview

An employee portal is a secure site where you can easily share and discuss information within your company or organisation, and keep all your staff on the same page. Employee portals are typically designed to be people orientated and to include processes for self-service tasks, such as booking leave or updating personal information.

Client

FDM is a diverse global IT consultancy provider, employing graduates, ex-forces and returners to work. FDM provides award winning IT training and places consultants onsite with a wide range of clients. FDM is looking to build an employee portal for their global workforce (**consultants and internal staff**), where users can access and share information as well as log holiday/ time off work.

Requirements

As this project will be managed through a product backlog there are no fixed requirements. The stories for this project will be discovered and adjusted throughout. However, an initial set of stories will be based on the following key features. These will be elaborated upon, split up, adjusted and added to.

1. Home Page with commonly sort after information
 - a. Allow admins to upload and remove portal content
 - i. News articles, files
 - b. Allow users to download files from the portal
 - c. Allows users to “Like” or “Dislike” portal content
 - d. Plug ins to FDM’s social media content
2. Employee Profiles
 - a. Each employee must have a profile
 - b. Profiles should be made up of public & private information
 - c. Employees should have the ability to update their public content
 - i. Picture, Job Role, department & Description, About me section
 - d. Admins can update employees private profile content
 - i. Line manager, Salary, Personal Details
3. Security
 - a. You must log in to access the portal
 - i. Username can be an email, enforced password policy
 - ii. Attempt to force entry locks account
 - b. All employees can see each other’s public profile information
 - c. Internal staff can see all portal content
 - d. Only the logged in users and portal admins can see private profile information

Additional Features

New features will be discovered and agreed during the project. The following are possible future features:

1. Holiday & Absence Booking System
 - a. Allow employees to request holiday
 - i. Request to go to line manager for approval
 - b. Once approved, appear on an employee's profile
 - c. Allow employees to log absences (e.g. Illness, Dentist Appointments)
 - i. Requests to go to line manager for approval
 - d. Enforce holiday limits, e.g. Joe Bloggs has 21 days' holiday, ensure Joe cannot exceed book more than 21 days off
2. Visual representation of the organisational structure
 - a. Including pictures, department

Key Non-Functional Requirements

While all projects must consider a balance of performance, security, usability and appearance, the key non-functional requirement that must be included within the definition of done for this project is:

Security: The application will be used to store personal and commercial data, and thus must be secure to both internal and external attacks or data breaches.

Supporting Information & Definitions

Consultant – Joined FDM's IT consultant programme, completing training at an FDM academy or waiting for a placement with one of FDM's clients

Internal Staff – Permanent employee, within the Sales, Recruitment, HR, IT, Training or Marketing departments
